

Facing challenges for Fuel Cell CHP in the EU

Date: 17th October 2013

Venue: Amsterdam

The market for fuel cell CHP is at a very interesting point in its development. Besides interesting technological innovations, new products from the U.S. and Japan will become available and boiler manufacturers are lining up new products for the residential market. Decisions have to be made by both governments, investors, manufacturers and end-users to progress at a certain scale. But what will happen on the versatile EU energy markets? Our conference aims to address the following questions:

- *Will new technology concepts bring the market forward?*
- *Will developments in US & Japan fast-track EU market uptake?*
- *What is happening today in the EU with FC CHP projects?*

Find out what the leading experts have to say:

	Goetz Bendele Bloom Energy		Martin Rapos IBM
	Masaru Tsuchiya SiEnergy		Fiona Riddoch Cogen EU
	Mark Kammerer Hydrogenics		Frank Obernitz CFC
	Mirela Atanasiu FCH-JU		Brendan Bilton ACAL

Join us on 17 October in Amsterdam and discuss the opportunities and challenges with our network of investors, energy companies, manufacturers and policy makers!
