Development of the Project Website...........................................................................................................2
Development of the Project Website

A website entirely dedicated to the project has been created within month 3rd and continuously updated till the end of the project. After the project’s ending the page will be updated with relevant findings.

The website is online under the address: http://www.unifhy.eu/

It contains the project logo, and references that the project have been financed by FCH JU (FP7 logo and European flag). It provides project and partners description, deliverables, project progress, meetings, photos, documents, contacts and a reserved area accessible to the partners.

During the project’s lifetime, the main description have been updated with information on the change of the coordinator, the inclusion of new Beneficiaries and Third Parties, the new project’s length and main achievements.

The project web site is a major channel for visibility of the UNIfHY project: it describes the project and its goals, and highlights the partners’ roles and their progressive records. The project web site also serves as an interactive tool for internal and external communication.

It provides virtual space to share documents and information, updates on the current research phases and results, information on further developments and advices about upcoming events.

A private area is used by partners to share documents, view current and planned project activities.

The setting up of a brochure with a brief description of the project and the most important information has been done and the brochure is downloadable on the project website.
Moreover, it has been created a sort of “Visual Identity”, such as a clearly identifiable and immediately recognizable image of the project. In consultation with the project partners, the former workpackage leader CIRPS has defined a common set of stylistic and graphic elements including Project logo, Templates and house style to be used for paper and electronic dissemination material. The visual identity has been used for all internal and external communications of the project. The stylistic and graphic elements have been used to realize the web site (www.unifhy.eu) and the brochure.
